Zehnder – everything you need to create a comfortable, healthy and energy-efficient indoor climate

Heating, cooling, fresh and clean air: at Zehnder, you will find everything you need to create a comfortable, healthy and energy-efficient indoor climate. Zehnder's wide and clearly structured portfolio can offer the right product for any project, be it private, public or commercial, new build or refurbishment. And where service is also concerned, you'll find that Zehnder is "always around you."

Heating

At Zehnder, **Heating** doesn't just come in the form of designer radiators. We offer solutions in all shapes and sizes, from radiant ceiling panels to heat pumps with integrated ventilation devices.

- Designer radiators
- Compact energy station with integrated heat pump
- Heating and cooling ceiling systems
- Comfortable indoor ventilation with heat recovery

Cooling

Zehnder also offers sophisticated solutions for indoor **Cooling**. These range from cooling ceiling systems to comfortable indoor ventilation with a supply of pre-cooled fresh air.

Fresh air

Fresh air – a product range with a long tradition at Zehnder. Zehnder Comfosystems provides products and solutions for comfortable indoor ventilation with heat recovery for houses and apartments, for new builds and for renovation projects.

- Comfortable indoor ventilation
- Compact energy station with integrated ventilation device

Clean air

Zehnder Clean air Solutions provide Clean air in buildings particularly prone to dust. In residential applications, the comfortable indoor ventilation provided by Zehnder Comfosystems filters external pollutants out of the air.

- Comfortable indoor ventilation with integrated fresh-air filter
- Compact energy station with integrated fresh-air filter
- Systems for clean air

Custom-building innovative hydronic systems for commerce, industry and institutions since 1946

Zehnder Rittling long ago coined the phrase “Reinventing Finned Tube” to describe its commitment to design innovation and its unlimited custom engineering capability. For decades, Zehnder Rittling’s constantly expanding inventory and proven ability to control costs without compromising the highest quality standards in manufacturing have made the name synonymous with image, performance, reliability, price, delivery and service.

Zehnder Rittling’s diversity and flexibility have freed architects from the constraints of designing around limited catalog selections of standard elements and enclosure configurations. Today Zehnder Rittling engineers can draw on, or modify, any of 42 different hydronic heating elements and 150 standard enclosure models to build any system an architect can draw to tolerances of less than 0.03125 inch, at an exceptionally competitive cost.

For the architects of the future, Zehnder Rittling will continue to advance finned tube technology in still more new directions and develop ever more efficient, cost-effective hydronic heat transfer systems.

Over sixty-five years of quality, innovation and service... and we’re just getting warmed up.

Security Enclosures

These sturdy, high-output enclosures are available in 8 standard models, with fronts and tops of 12-, 14- or 16-GA furniture quality rolled steel. All models may be modified to suit any hot water or steam heating application, and ordered with any of Zehnder Rittling's 42 hydronic heating elements.

S-SL Sloped Grille Enclosures meet interior design specifications requiring consistent and even heat through conventional louvers when security of enclosure is imperative.

There are two styles of perforation available, partial and full. Both styles fully enclose the finned tube element and restrict access to the occupants.

The partially perforated models allow for finned tube enclosure applications where typical enclosures allow too much access or can be removed without tools. The fully perforated models allow for applications that call for bare element to be installed but cannot be exposed or left open. All security models use offset channel to mount to the wall in place of the typical snap mounting channel. They also return to the wall for direct mounting and do not attach to brackets. These design differences along with the perforation in place of louvers or grilles restrict unwanted access and provide a tamperproof application.

These features make them ideally suited for heated the following applications:

- Correctional facilities
- Healthcare institutions
- Apartment complexes
- Schools
- Other high-traffic or harsh environments

Rittling accessories custom-fit any installation with no metal cutting!

A full line of accessories is available to ensure a professional custom fit, including:

- 3-1/2" end caps
- 12" wide end caps with access doors
- Inside and outside corners
- Wall trims: 3-1/2", 5", 7-1/2"
- Access sections with access doors (overlap or butt fit)
- Control dampers:
 - Allenhead operator
 - Security
- Second row brackets
- Wall pipe hanger
- Offset mounting channel
- Offset full backpanel

Features

Enclosures

- 8 security models in pattern strip perforation or fully perforated styles
- 1 louvered style (S-SL)
- Perforation is standard 1/8" diameter holes on 3/16" staggered centerlines. Other perforation styles.
- 12-, 14- or 16-gauge, phosphatized cold rolled steel (perforated)
- 14-, 16- or 18-gauge, phosphatized cold rolled steel (S-SL)
- Powder coating finish available in standard or decorator colors
- 1' to 8' lengths in 6" increments
- Stainless steel available

Copper/Aluminum Element

- Tube: 3/4", 1" or 1-1/4"
- Fin: 2-3/4" x 4", 3-1/4" x 3-1/4" or 4-1/4" x 4-1/4"
- 1' to 12' lengths in 6" increments

Steel Element

- Tube: 1", 1-1/4" or 2"
- Fin: 3-1/4" x 3-1/4" or 4-1/4" x 4-1/4"
- 1-1/2' to 10' length in 6" increments

Mounting

- Off-set mounting channel (standard)
- Off-set full back panel; 14-, 16- or 18-gauge galvanized steel (perforated enclosures) and 18- or 20-gauge galvanized steel (S-SL)
- Urethane gasket for air seal available
- 5/16" mounting holes in bottom flange of enclosure
- 4' or 8' lengths

Hangers

- Wall mounted second row brackets used for mounting all rows of element
- 16-GA galvanized steel
- Slide cradle will accommodate 1-3/4-inch linear expansion for quiet operation
- Wall pipe hanger for use with bare tube supply and return pipes.

Joints

- Internal joggle joiners provide hairline joints without any external fasteners

Damper (optional, partial perforated only)

- Tamper-proof, allen tool operated with exclusive "Anti-Slip" damper rod
- Durable knob option available for S-SL only (non-security)

Accessories

- Standard accessories are 18-gauge
- 14- and 16-gauge are available
- Overlap for telescoping fit
- Optional butt fit available

Model S-SL shown

* EDR - Equivalent Direct Radiation area (for steam heat) per active (finned) lineal foot of tube.

Important rating information Performance ratings based on:

- Installation at height shown. (Lower heights are not recommended; for greater heights refer to EZselect selection software).
- Entering air temperature of 65°F. (For other temperatures, refer to EZselect selection software).

- Steam at nominal 1 (actual 0.9) psig and 215°F. (For other conditions, refer to EZselect selection software).
- Water average temperature (°F) shown and velocity of 3 fps or more. (For lower velocities, refer to EZselect selection software).

Performance ratings - model S-SP5/PS5

* EDR - Equivalent Direct Radiation area (for steam heat) per active (finned) lineal foot of tube.

Important rating information Performance ratings based on:

- Installation at height shown. (Lower heights are not recommended; for greater heights refer to EZselect selection software).
- Entering air temperature of 65°F. (For other temperatures, refer to EZselect selection software).

- Steam at nominal 1 (actual 0.9) psig and 215°F. (For other conditions, refer to EZselect selection software).
- Water average temperature (°F) shown and velocity of 3 fps or more. (For lower velocities, refer to EZselect selection software).

Performance ratings - model S-SL

* EDR - Equivalent Direct Radiation area (for steam heat) per active (finned) lineal foot of tube.

Important rating information Performance ratings based on:

- Installation at height shown. (Lower heights are not recommended; for greater heights refer to EZselect selection software).
- Entering air temperature of 65°F. (For other temperatures, refer to EZselect selection software).

- Steam at nominal 1 (actual 0.9) psig and 215°F. (For other conditions, refer to EZselect selection software).
- Water average temperature (°F) shown and velocity of 3 fps or more. (For lower velocities, refer to EZselect selection software).

Performance ratings - model S-SL

* EDR - Equivalent Direct Radiation area (for steam heat) per active (finned) lineal foot of tube.

Important rating information Performance ratings based on:

- Installation at height shown. (Lower heights are not recommended; for greater heights refer to EZselect selection software).
- Entering air temperature of 65°F. (For other temperatures, refer to EZselect selection software).

- Steam at nominal 1 (actual 0.9) psig and 215°F. (For other conditions, refer to EZselect selection software).
- Water average temperature (°F) shown and velocity of 3 fps or more. (For lower velocities, refer to EZselect selection software).

Performance ratings - model S-DSP5

* EDR - Equivalent Direct Radiation area (for steam heat) per active (finned) lineal foot of tube.

Important rating information Performance ratings based on:

- Installation at height shown. (Lower heights are not recommended; for greater heights refer to EZselect selection software).
- Entering air temperature of 65°F. (For other temperatures, refer to EZselect selection software).

- Steam at nominal 1 (actual 0.9) psig and 215°F. (For other conditions, refer to EZselect selection software).
- Water average temperature (°F) shown and velocity of 3 fps or more. (For lower velocities, refer to EZselect selection software).

Performance ratings - model PDS5

* EDR - Equivalent Direct Radiation area (for steam heat) per active (finned) lineal foot of tube.

Important rating information Performance ratings based on:

- Installation at height shown. (Lower heights are not recommended; for greater heights refer to EZselect selection software).
- Entering air temperature of 65°F. (For other temperatures, refer to EZselect selection software).

- Steam at nominal 1 (actual 0.9) psig and 215°F. (For other conditions, refer to EZselect selection software).
- Water average temperature (°F) shown and velocity of 3 fps or more. (For lower velocities, refer to EZselect selection software).

Performance ratings - model S-TP5/PR5

Important rating information Performance ratings based on:

- Installation at height shown. (Lower heights are not recommended; for greater heights refer to EZselect selection software).
- Entering air temperature of 65°F. (For other temperatures, refer to EZselect selection software).

- Steam at nominal 1 (actual 0.9) psig and 215°F. (For other conditions, refer to EZselect selection software).
- Water average temperature (°F) shown and velocity of 3 fps or more. (For lower velocities, refer to EZselect selection software).

Performance ratings - model S-TP5/PR5

Perforated enclosure

In BTU/hr per active (finned) lineal foot of tube at entering air temperature of 65°F

* EDR - Equivalent Direct Radiation area (for steam heat) per active (finned) lineal foot of tube.

Important rating information Performance ratings based on:

- Installation at height shown. (Lower heights are not recommended; for greater heights refer to EZselect selection software).
- Entering air temperature of 65°F. (For other temperatures, refer to EZselect selection software).

- Steam at nominal 1 (actual 0.9) psig and 215°F. (For other conditions, refer to EZselect selection software).
- Water average temperature (°F) shown and velocity of 3 fps or more. (For lower velocities, refer to EZselect selection software).

Performance ratings - model S-FP5/S-RP5

Design data

The effects of water velocity on finned tube output

The Institute of Boiler and Radiator Manufacturers sponsored a test program at the University of Illinois to determine the effect of water velocity on heat output of various sizes of finned tube element.

The results of this test show that when the water velocity falls below 0.4 f.p.s., the flow changes from turbulent to streamline. With systems designed at water velocities below this point the output cannot be accurately predicted so should always be avoided.

Figure 1 shows rating factors that can be utilized when the water velocity falls below 3 f.p.s.

It is recommended when designing low-load systems that the water velocity be a key factor in element selection.

For more information on this topic, please refer to the 1969 equipment volume of ASHRAE Guide and Data Book Page #393.

Note:
 ■ ---- below critical velocity

Figure 2
Pipe water capacities and quantities circulated at velocity of 3 feet per second*

Pipe Size	Gallons per linear foot	Gallons per minute*	Pounds per hour*
1/2"	.016	2.88	1440
3/4"	.023	4.14	2070
1"	.040	7.20	3600
1-1/4"	.063	11.34	5660
1-1/2"	.102	18.36	9160
2"	.170	30.60	15300
2-1/2"	.275	49.50	24850
3"	.390	70.20	35000

Note:
 ■ *3 feet per second velocity is basis for hot water rating factors shown on this page

$$\text{Velocity ft./sec.} = \frac{\text{lbs./hr.}}{(\text{gal./ft.}) (3600) (8.3)}$$

Design data

Mechanical specifications

General

Furnish and install finned tube heating elements and enclosures as indicated on plans, with required mounting components and accessories. Material shall be manufactured in accordance with Zehnder Rittling's High Quality Standards and in conformance to ISO 9001:2008 standards established and maintained by Zehnder Rittling of Buffalo, New York.

Steel heating elements

Steel heating elements shall consist of 0.027" thick galvanized fins permanently bonded to high pressure A106 seamless schedule 40B steel tubing by mechanically expanding the steel tubing to the steel fins. Steel tube wall thickness; 1" dia. - 0.133", 1-1/4" dia. - 0.140", 2" dia - 0.154", prior to tube expansion.

Guaranteed working pressures:

1" IPS - 780 psig at temperature up to 650°F. 1-1/4" IPS - 660 psig at temperatures up to 650°F. 2" IPS - 405 psig at temperatures up to 650°F.

Copper-aluminum heating elements

Copper-aluminum heating elements shall consist of 0.016" thick, 1100 grade aluminum fins permanently bonded to lightly annealed copper alloy 122 seamless drawn tubing by mechanically expanding the copper tubing to the aluminum fins. Copper tube wall thickness; 3/4" dia - 0.020", 1" dia. - 0.025", 1-1/4" dia. - 0.028", prior to tube expansion. Copper tube meets the following ASTM standard

designations: ASTM B42, ASTM B68, ASTM B75, ASTM B88, ASTM B111, ASTM B152, ASTM B280.

Guaranteed working pressures:

1-1/4" CU - 194 psig at temperatures up to 300°F. 1" CU - 204 psig at temperature up to 300°F. 3/4" CU - 218 psig at temperatures up to 300°F.

Mounting channel or full back panel:

Mounting channel shall be off-set from the wall and built from 20-gauge galvanized steel and the full back panel from 14-, 16- or 18-gauge galvanized steel (perforated enclosure) and 18- or 20-gauge galvanized steel (S-SL enclosure). For rigidity, the mounting channel or full back panel shall position the enclosure directly against the wall to limit access. A urethane gasket is available to form an air seal at the wall (optional for mounting channel).

Hanger brackets:

All hanger brackets shall be die formed for rigidity.

All hangers must provide for lengthwise movement of elements during expansion and contraction as well as aligning elements to prevent contact with brackets, walls, or enclosure.

Enclosures and accessories:

Enclosures shall be of the type as shown on the drawings. Enclosures shall be manufactured from 12-, 14-, or 16-gauge (perforated) or 14-, 16-, or 18-gauge (S-SL) cold rolled steel. All enclosures shall be reinforced with welded gussets. The joining of enclosure shall be accomplished by use of internal joggle joiners to provide for hairline joints and added rigidity.

Securing the top portion of the enclosure to the wall will be accomplished by use of a full length

mounting channel or full back panel. The lower portion of the enclosure will be secured to the wall using security fasteners, which prevents removal without special tools (by others).

Damper:

Enclosure dampers shall be provided where indicated. Damper blades shall be fabricated from 18-gauge material painted to match enclosure color. Threaded damper screw and trunion shall provide positive operation of blade to provide variable heat output.

Security dampers available, to control airflow as required (operated by use of an allen key.) Knob damper only available with S-SL enclosure.

Access doors

Access doors shall be provided where noted on plans. Doors shall be 6" x 6". Doors shall be hinged and have recessed security allen head operators. Doors shall be positioned directly in enclosure (or/in 12" long access panel). Consult factory on enclosure heights of 8" or below.

Paint:

All enclosures and accessories shall be degreased and chemically phosphatized before application of a durable, attractive, electrostatic epoxy powder coating. Decorator colors are available from Zehnder Rittling's color selector chart.

In the interest of product improvement, we reserve the right to make product and specification changes without notice.

Special Applications

Zehnder Rittling's reputation for leadership in commercial heating systems design and fabrication thrives on a demonstrated ability to modify or adapt components from our vast standard inventory and to break new ground with innovative applications.

Our ingenuity and expertise free architects from the constraints of hydronic-heating conventions. We can, for instance, customize enclosures to any dimensions in stainless, textured embossed, or perforated steel for installation anywhere: in ceilings, walls, or trenches. We'll angle finned tube systems to match the wall or slope of a floor. We can even fabricate the enclosure to match the curve of a wall. We'll fabricate all copper heating elements, bronze anodized and other specialty outlet grilles, or pipe enclosures without grilles. Challenge us and we'll build it!

If you have a special application you would like us to evaluate, please call to arrange a consultation with a Zehnder Rittling expert.

Warranty

Zehnder Rittling guarantees its products to be free from defects in material and workmanship for a period of one year from date of shipment from our Buffalo, New York factory.

Should there be any defects in the good(s), the purchaser should promptly notify Zehnder Rittling and upon receipt of written consent from Zehnder Rittling, the purchaser shall return the defective good(s) to the factory for inspection with freight prepaid. If inspection shows the goods to be defective, Zehnder Rittling will at its discretion repair or replace the said item(s).

Defects arising from damage due to shipment, improper installation, negligence or misuse by others are not covered by this warranty.

This warranty is extended only to the original purchaser from Zehnder Rittling.

IMPORTANT: Approved submittal documentation, specific to each project, supersedes the general guidelines contained within this document.
